Google Workspace – Complete Notes

① What is Google Workspace?

- Google Workspace is a set of **cloud-based** productivity and collaboration tools from Google.
- It helps individuals and teams to create, share, communicate and work together online.
- All applications are accessible from anywhere using the internet.

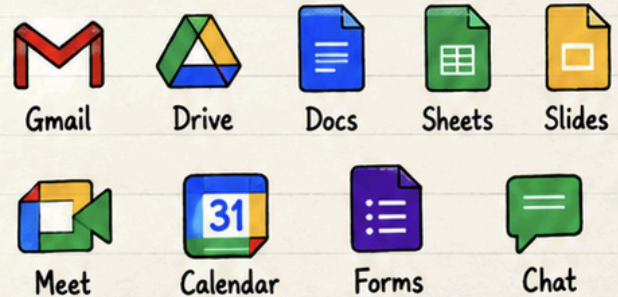

Key Takeaway

Google Workspace = Complete set of productivity, collaboration and communication tools available on the cloud. ✓

② Key Applications

- **Gmail** – Email and communication
- **Drive** – Store and share files
- **Docs** – Create and edit documents
- **Sheets** – Work with spreadsheets
- **Slides** – Create presentations
- **Meet** – Online meetings and video calls
- **Calendar** – Schedule events and meetings
- **Forms** – Collect information and create surveys
- **Chat** – Team messaging and collaboration

Google Workspace Apps

③ Who Uses Google Workspace?

- **Individuals** → Students, freelancers, personal use
- **Businesses** → Small, medium and large organizations
- **Educational Institutions** → Schools and universities
- **Government Organizations** → For communication and collaboration
- **Remote Teams** → For online work and global collaboration

Common Use Cases

- Email communication (Gmail)
- Store and share files (Drive)
- Create and edit documents (Docs)
- Track project data (Sheets)
- Team meetings (Meet)
- Schedule events (Calendar)
- Collect feedback (Forms)
- Team chat (Chat)

④ Why it Matters?

- Improves team collaboration and productivity
- Access from **anywhere** on any device
- Real-time editing and communication
- Secure and reliable cloud infrastructure
- Helps organizations work faster and more efficiently
- Widely used in industry (**good to know for interviews**)

Career Relevance

- **Widely used** in IT companies and MNCs
- Useful for QA, BA, Developers, DevOps
- Helps in reporting, documentation and team collaboration
- Commonly asked in **interviews**
- Important for remote and hybrid work

Work from Anywhere

Any Device

Team

Anywhere

- ✓ All tools in one platform
- ✓ Real-time collaboration
- ✓ Access from anywhere
- ✓ Helps teams work smarter

Google Workspace Ecosystem

① What is Google Workspace Ecosystem?

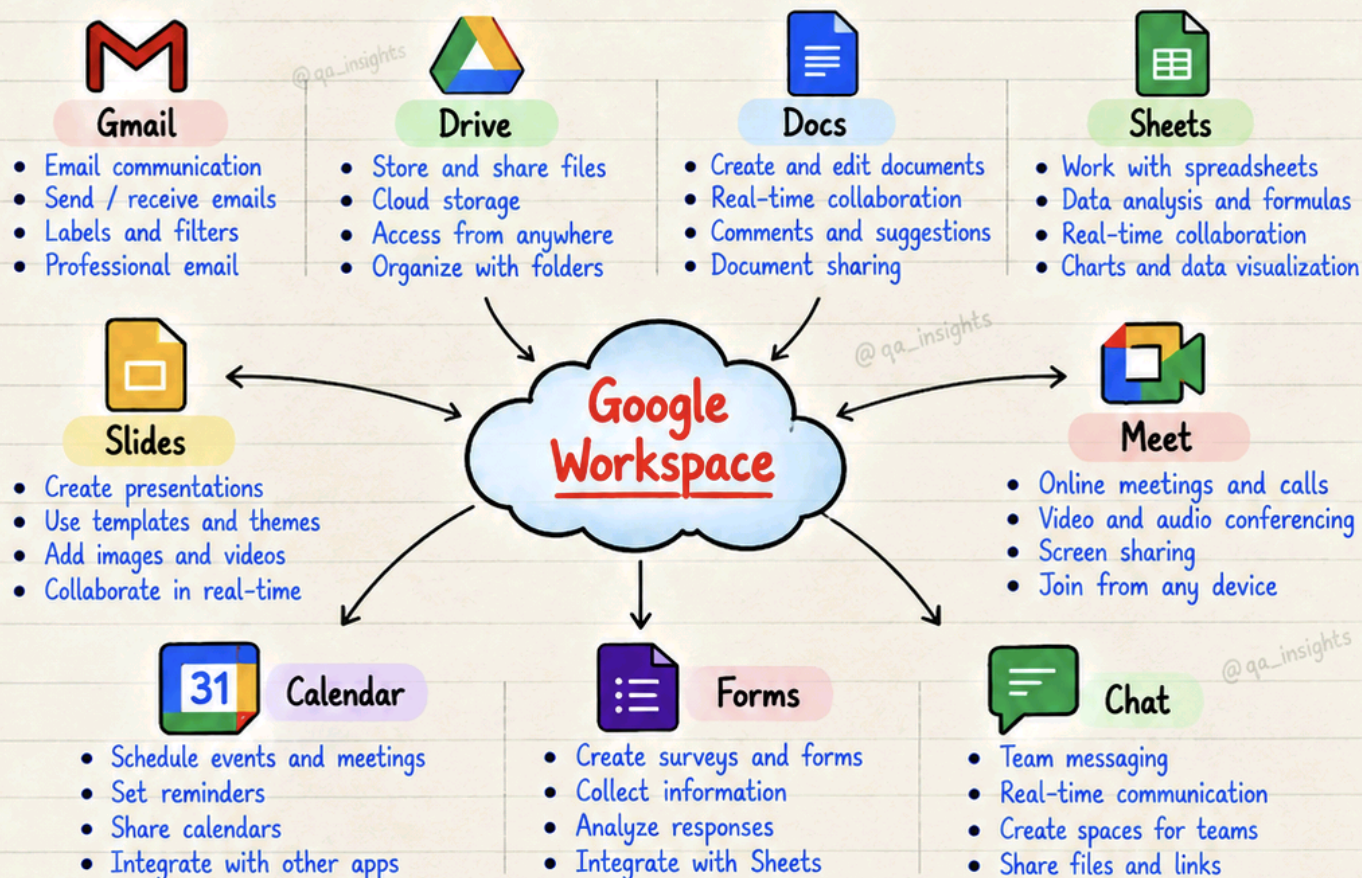

- A set of integrated **cloud-based** applications that work together.
- Helps you create, store, communicate and collaborate from anywhere.
- All apps are connected and work seamlessly using your Google account.

Key Takeaway

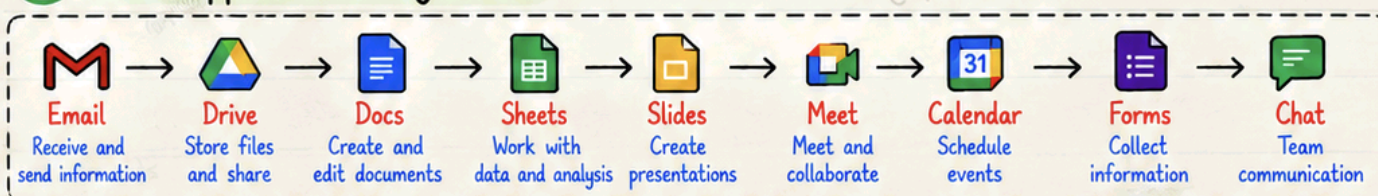

Google Workspace = Multiple productivity tools that work together in a connected ecosystem.

② Key Applications in Google Workspace

③ How Apps Work Together?

Google Drive – Complete Notes

① What is Google Drive?

- Google Drive is a **cloud storage** service from Google.
- It helps you store, access, share and manage files online.
- You can access files from anywhere on any device using your Google account.

Key Takeaway

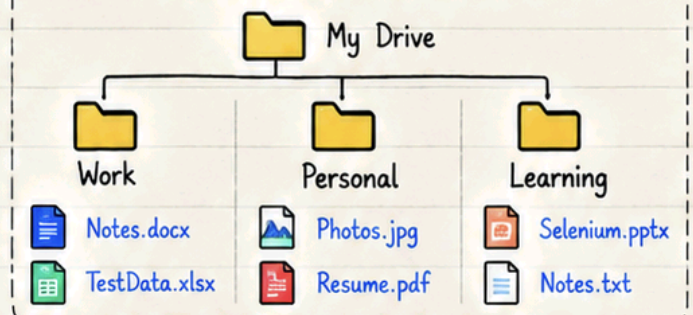

Google Drive = Secure cloud storage to store, organize, share and access files from anywhere.

② Files and Folders

- You can **upload** different types of files (documents, images, videos, etc).
- Create **folders** to organize files.
- Move, rename, copy or delete files easily.
- Keep a proper folder structure for better organization.

Files and Folders Example

③ Storage

- Google Drive provides **cloud storage** (available with Google account).
- Free accounts usually get **15 GB** (shared across Drive, Gmail and Photos).
- Paid plans (Google Workspace) provide more storage for individuals and organizations.

Storage Usage

④ Sharing

- You can share files and folders with others.
- Set permissions: **Viewer**, **Commenter** or **Editor**.
- Share with specific people or using a link.
- Useful for collaboration and team work.

Sharing Options

⑤ Search

- Use the search bar to quickly find files.
- Search by **file name**, **type**, **owner** or **keywords**.
- Use filters like Type, People, Modified date, Location.
- Helpful when you have many files.

Search in Google Drive

Google Drive Sharing & Permissions

① Why Share Files in Google Drive?

- Share files and folders with team members, colleagues or external users.
- Work together in **real-time**.
- Control who can view, **comment** or edit.
- Useful for collaboration, reviews and approvals.

Key Takeaway

Sharing allows you to give access to files and folders with different permission levels (**Viewer**, **Commenter**, **Editor**).

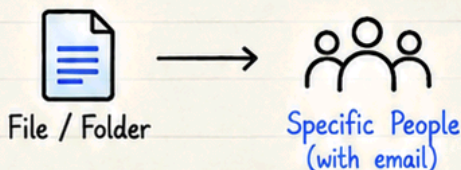

② Permission Levels

Permission	What they can do?	Best used for
 Viewer	• Can only view the file • Cannot make changes	• Sharing with external users • Read-only access
 Commenter	• Can view and add comments • Cannot edit the file	• Reviews and feedback • Team collaboration
 Editor	• Can view, comment and edit • Can make changes to the file	• Team members working together on a file

③ Restricted vs Link Sharing

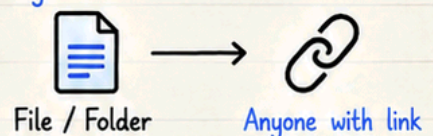

Restricted Sharing

- Share with **specific people** (using email).
- Only invited users can access.
- More secure and recommended for sensitive files.

Link Sharing

- Create a **shareable link**.
- Anyone with the link can access (based on permission level).
- Useful for quick sharing.
- Less secure compared to restricted sharing.

④ How to Share (Steps)

⑤ Best Practices

- ✓ Use **restricted sharing** for important files.
- ✓ Give **minimum required permission**.
- ✓ Review and remove old access.
- ✓ Avoid **public link sharing** for sensitive data.

Google Docs – Basics

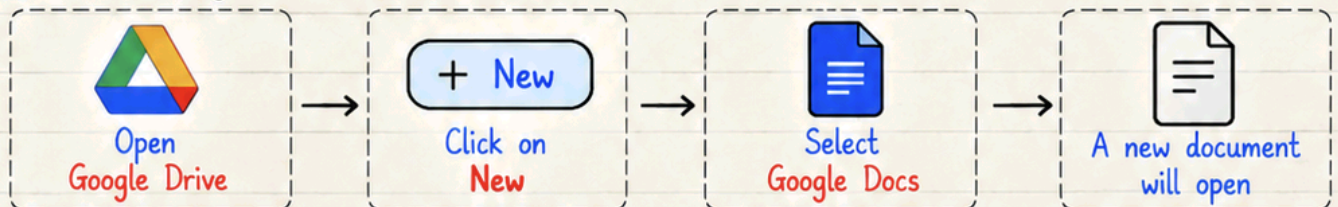

① What is Google Docs?

- Google Docs is a **cloud-based** word processor from Google.
- It helps you create, edit and share documents online in **real-time**.
- Auto-saves your work and accessible from anywhere using your Google account.

Key Takeaway

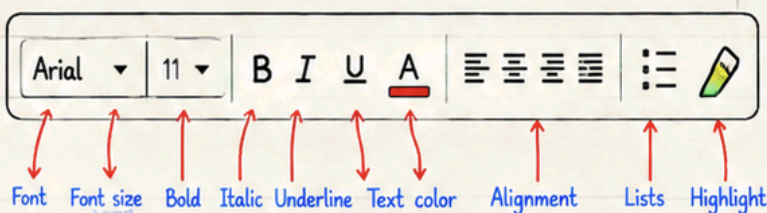

Google Docs = Online word processor to create, edit and collaborate on documents in real-time. ✓

② Creating a New Document

③ Formatting Text

- Change font **style**, **size** and **color**.
- Use **bold**, **italic** and **underline**.
- Adjust text alignment (left, center, right, justify).
- Add **bullet points** and **numbered lists**.
- Use **highlight color** for important text.

④ Styles and Headings

- Use built-in styles like **Heading 1**, **Heading 2**, **Title**, etc.
- Helps to maintain a consistent format.
- Useful for creating structured documents like reports, manuals, etc.

Styles (Example)

Normal text

Title

Heading 1

Heading 2

Heading 3

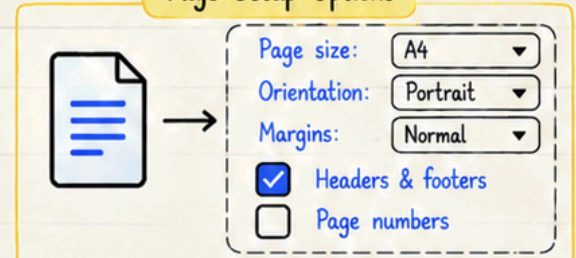

Why use styles?

- Better document structure
- Easier navigation
- Helps in Table of Contents
- Maintains consistency

⑤ Page Setup

- Set **page size** (A4, Letter, etc.).
- Adjust **orientation** (Portrait / Landscape).
- Change **page margins** (Top, Bottom, Left, Right).
- Add **page numbers**, **headers** and **footers**.
- Useful for reports, assignments and official documents.

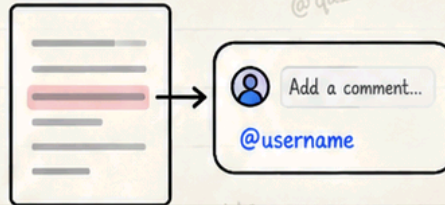

Page Setup Options

Google Docs – Advanced

1 Comments

- Add **comments** to give feedback.
- Select text → Click on **Comment**.
- Tag team members using **@mentions**.
- Useful for reviews and discussions.

Key Takeaway

Comments and suggestions make collaboration easy and keep feedback organized in one place. ✓

2 Suggestions (Suggesting Mode)

- Suggesting mode allows you to **propose changes** without directly editing the document.
- Others can **Accept** or **Reject** the changes.
- Useful for reviews, approvals and team collaboration.

Suggesting Mode Example

Original: The project is completed.

Suggested: The project is successfully completed.

✓ Accept

✗ Reject

How to Enable?

3 Version History

- Keeps a **history** of all **changes** made to the document.
- You can **view previous versions** and **restore** if needed.
- Useful to track who made changes and when.

Version History (Example)

Version History

- Today, 11:30 AM
By Mahesh
- Today, 10:00 AM
By Team Member
- Yesterday, 5:20 PM
By Admin

Useful For

- Track changes
- Compare versions
- Restore old version
- See who made changes
- Helpful for team work

4 @Mentions

- Type **@** and select a team member.
- They will get a notification.
- Useful to assign tasks, ask for input or get quick attention.

@Mentions Example

Hi @Priya can you please review this section?

- Priya Sharma
priya@company.com
- Rahul Verma
rahul@company.com

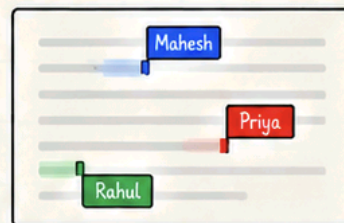

Common Use Cases

- Ask for review
- Assign tasks
- Get quick feedback
- Notify team members
- Useful in large documents

5 Real-time Collaboration

- Multiple **people** can work on the same document at the **same time**.
- See who is editing (**colored cursor and name**).
- Changes are saved **automatically**.
- Great for team work, meetings and project documentation.

Real-time Collaboration (Example)

Benefits

- Work together in real-time
- See team members' changes
- No file version conflicts
- Improves productivity
- Useful for remote teams

Google Docs – Productivity

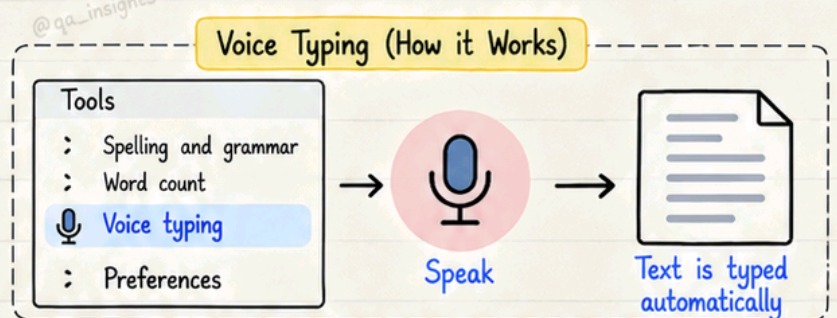

① Templates

- Use pre-designed **templates** to create documents quickly.
- Available for resumes, reports, meeting notes, project plans, etc.
- Save time and maintain a professional format.

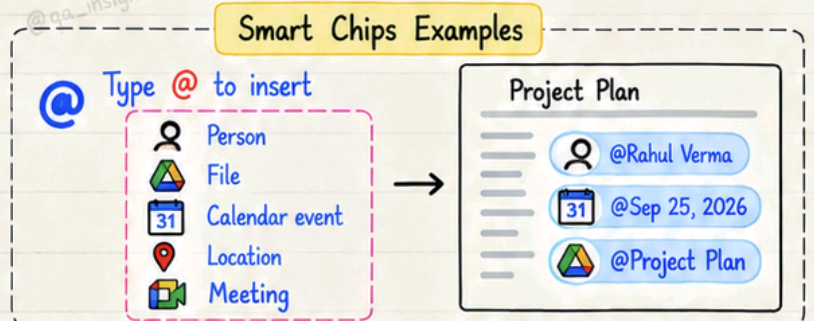

② Voice Typing

- Convert your **speech** to **text** in real-time.
- Click **Tools** → **Voice typing**.
- Speak clearly and your words will be typed automatically.
- Useful for long documents, notes and quick drafts.

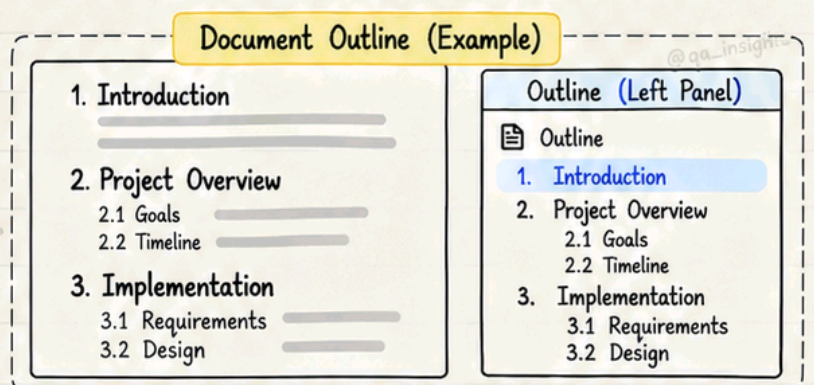

③ Smart Chips

- Smart chips help you add **rich information** to your document.
- Type **@** to insert people, files, calendar events, locations and more.
- Makes documents interactive and well-connected.

④ Document Outline

- Automatically creates an **outline** based on your headings.
- Helps you quickly navigate different sections.
- Easy to rearrange sections by dragging.
- Useful for long documents like reports, manuals, etc.

⑤ Tips & Best Practices

- ✓ Use **templates** for common documents.
- ✓ Use **voice typing** for faster writing.
- ✓ Use **smart chips** to link people, files and events.
- ✓ Use **document outline** for better navigation.

Key Takeaway

Use these productivity features to **save time**, stay organized and create professional documents easily.

Google Sheets – Basics

① What is Google Sheets?

- Google Sheets is a **cloud-based spreadsheet** from Google.
- Helps you store, organize, analyze and share data online.
- You can work on it in **real-time** with your team.

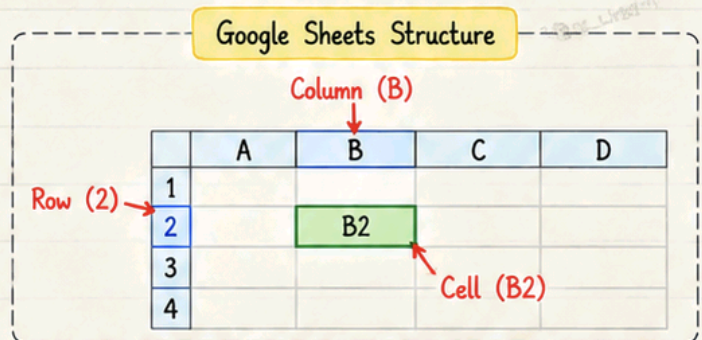

Key Takeaway

Google Sheets = Online spreadsheet to manage and analyze data with real-time collaboration.

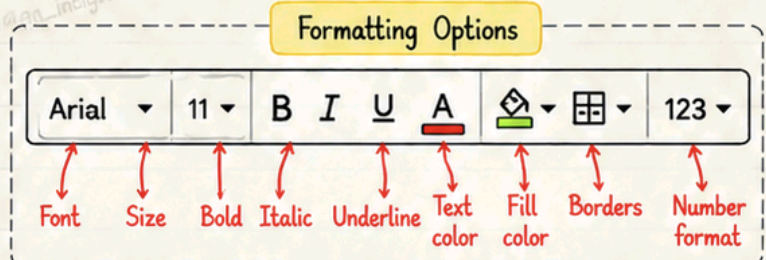

② Rows, Columns and Cells

- Data is stored in **rows** and **columns**.
- Intersection of a row and column is called a **cell** (e.g., A1).
- Columns are represented by letters (A, B, C...) and rows by numbers (1, 2, 3...).

③ Formatting

- Change **font style**, **size** and **color**.
- Use **bold**, **italic**, **underline**.
- Apply **cell fill color** and **borders**.
- Format numbers (Number, Date, Currency, etc.).

④ Basic Formulas

- Formulas start with **=** (equal sign).
- Used to perform **calculations** on data.
- Some common formulas:

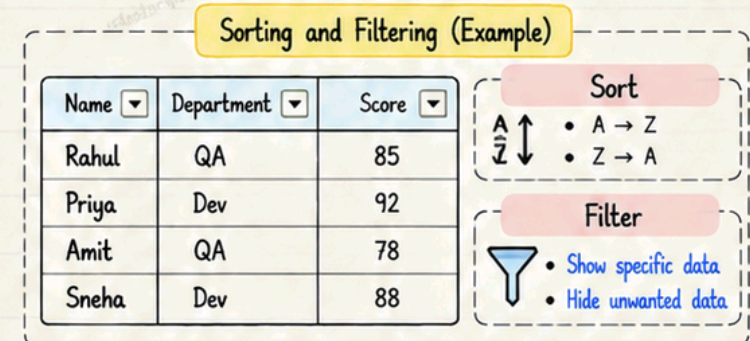

Formula	Example	What it does
SUM	=SUM(A1:A5)	Adds numbers
AVERAGE	=AVERAGE(A1:A5)	Finds average
COUNT	=COUNT(A1:A5)	Counts cells with numbers
IF	=IF(A1>0,"Yes","No")	Returns value based on condition

⑤ Sorting

- Arrange data in **ascending** (A → Z) or **descending** (Z → A) order.
- Useful to organize and analyze data.

⑥ Filtering

- Filter data to show only what you need.
- Use **filter** dropdowns on column headers.
- Helpful for finding specific information in large data.

Google Sheets - Functions

① What are Functions?

- Functions are **pre-built formulas** in Google Sheets.
- They help you perform calculations, analyze data and **save time**.
- Start a function with **=** (**equal sign**).

Key Takeaway

Functions help you work with data **faster** and **more accurately**.
Start with **=** and use the correct function name and range.

② Common Functions with Examples

Function	Purpose	Example	Result	Explanation
SUM	Adds numbers	=SUM(A1:A5)	250	Adds all numbers in the range A1:A5
AVERAGE	Finds average	=AVERAGE(A1:A5)	50	Returns the average of values
COUNT	Counts cells with numbers	=COUNT(A1:A5)	5	Counts only numerical values
COUNTIF	Counts based on a condition	=COUNTIF(B2:B10, "QA")	3	Counts cells where value is "QA"
IF	Returns value based on condition	=IF(A2>=50, "Pass", "Fail")	Pass	Returns "Pass" if A2 is 50 or more, otherwise "Fail"
VLOOKUP	Looks for a value in first column	=VLOOKUP(A2, B2:D10, 3, FALSE)	HR	Searches A2 in first column and returns value from 3rd column
XLOOKUP	Modern lookup (more flexible)	=XLOOKUP(A2, A2:A10, B2:B10, "Not Found")	HR	Searches A2 in a range and returns matching value. Easier than VLOOKUP

③ Sample Data

	A	B	C
1	Name	Department	Score
2	Rahul	QA	85
3	Priya	Dev	92
4	Amit	QA	78
5	Sneha	Dev	88
6	Vikram	QA	70

④ Examples Using Sample Data

- Total score: =SUM(C2:C6) → 413
- Average score: =AVERAGE(C2:C6) → 82.6
- Count of students: =COUNT(A2:A6) → 5
- Count of QA: =COUNTIF(B2:B6, "QA") → 3
- Check score: =IF(C2>=50, "Pass", "Fail") → Pass
- Department of Priya: =VLOOKUP("Priya", A2:C6, 2, FALSE) → Dev
- Score of Amit: =XLOOKUP("Amit", A2:A6, C2:C6, "NA") → 78

⑤ Tips & Best Practices

- ✓ Use **correct range** (e.g., A1:A10).
- ✓ Use **double quotes** for text values.
- ✓ Check for **empty cells** to avoid errors.
- ✓ **XLOOKUP** is preferred over VLOOKUP (more flexible).
- ✓ Combine functions for powerful analysis (e.g., IF + COUNTIF).

Common Mistakes

- ⚠ Forgetting the **=** sign.
- ⚠ Selecting wrong range.
- ⚠ Using text without quotes.
- ⚠ Mismatched data types.
- ⚠ Using VLOOKUP with wrong column index.

Google Sheets – Advanced

1 Pivot Tables

- Pivot tables help you **summarize** large data quickly.
- You can **group, filter** and analyze data without writing formulas.
- Useful for reports, dashboards and data analysis.

Pivot Table Example

Sample Data		
Date	Department	Sales
Jan	QA	1000
Jan	Dev	2000
Feb	QA	1500
Feb	Dev	2500
Mar	QA	1200
Mar	Dev	1800

Pivot Table (Summarized)	
Department	Total Sales
Dev	6300
QA	3700
Grand Total	10000

2 Conditional Formatting

- Automatically **changes the appearance** of cells based on conditions.
- Helps you quickly **identify** important data like high values, low values or duplicates.

Conditional Formatting Examples

Highlight High Values

Score
95
70
88
45
92

Highlight values > 80

Color Scales

Sales
500
1200
800
2000
300

Show data range with colors

Highlight Duplicates

ID
101
102
101
103
102

Highlight duplicate values

3 Data Validation

- Controls what data can be entered in a cell.
- Helps maintain **data accuracy** and **consistency**.
- You can create dropdown lists, set number ranges, dates, etc.

Data Validation Examples

Dropdown List

Department

QA

QA

Dev

Prod

Support

Allow only predefined values

Number Range

Score

0 - 100

Allow only numbers between 0 and 100

Date Validation

Start Date

01-09-2026

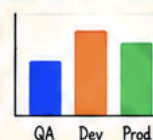

Allow only valid dates

4 Charts

- Helps you **visualize data** in a better way.
- Useful for reports, presentations and dashboards.
- You can create different types of charts like bar, line, pie, etc.

Chart Types (Examples)

Column Chart

Compare values

Line Chart

Show trends over time

Pie Chart

Show proportion of data

Combo Chart

Combine 2 types of charts

5 Tips & Best Practices

- ✓ Use **pivot tables** for large data analysis.
- ✓ Use **conditional formatting** to highlight important data.
- ✓ Apply **data validation** to maintain correct data.
- ✓ Use **charts** to present data clearly.

Common Mistakes

- ✗ Not updating pivot tables after data changes.
- ✗ Using too many conditional formatting rules.
- ✗ Not setting proper data validation.
- ✗ Choosing the wrong chart type.
- ✗ Ignoring clear labels and titles.

Google Sheets – Collaboration

1 Sharing a Spreadsheet

- You can **share** a Google Sheet with specific people or anyone with a link.
- Choose the permission level: **Viewer**, **Commenter** or **Editor**.
- You can also set an expiration date or restrict access to your organization.

Share Dialog (Example)

Share "Project Tracker" ⚙️

Add people, groups and calendar events

	rahul@company.com	Editor
	priya@company.com	Commenter
	amit@company.com	Viewer
	Anyone with the link Anyone on the internet with the link can view	Viewer

Copy link

Permission Levels

- Viewer**
 - Can only view
 - Cannot edit or comment
- Commenter**
 - Can view and add comments
 - Cannot edit
- Editor**
 - Can view, comment and edit

2 Comments & Mentions

- Use **comments** to give feedback on specific cells or data.
- Type **@** to mention team members. They will get a notification.
- Useful for discussions, reviews and quick questions.

Comments Example

	A	B	C
1	Task	Owner	Status
2	Design	Rahul	In Progress
3	Development	Priya	Not Started
4	Testing	Amit	Not Started

Priya Sharma
Today, 11:20 AM

@Rahul can you please update the status?

Reply...

3 Protected Ranges

- You can **protect** specific cells, sheets or ranges to prevent unwanted changes.
- Useful for important formulas, headers or final data.

Protect Range (Example)

	A	B	C
1	Product	Price	Total
2	Laptop	50000	50000
3	Phone	30000	30000
4	Tablet	20000	20000

Protected sheets & ranges

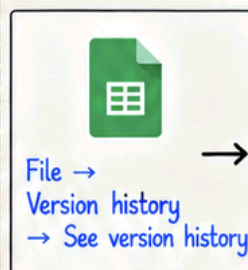

Range
C2:C100

Permissions
Only you can edit

4 Version History

- Keeps a **history** of all changes made to the sheet.
- You can view, compare and restore previous versions.
- Useful to track who made changes and when.

Version History (Example)

Version History

All versions

- Today, 11:45 AM
By Priya
- Today, 10:20 AM
By Rahul
- Yesterday, 4:30 PM
By Amit

What You Can Do

- View previous versions
- See who made changes
- Compare versions
- Restore an older version if needed
- Track changes with timestamps.

5 Tips & Best Practices

- ✓ Share with the **right permission level**.
- ✓ Use **comments** and **@mentions** for clear communication.
- ✓ **Protect** important ranges to avoid accidental changes.
- ✓ Regularly check **version history** for tracking and recovery.

Key Takeaway

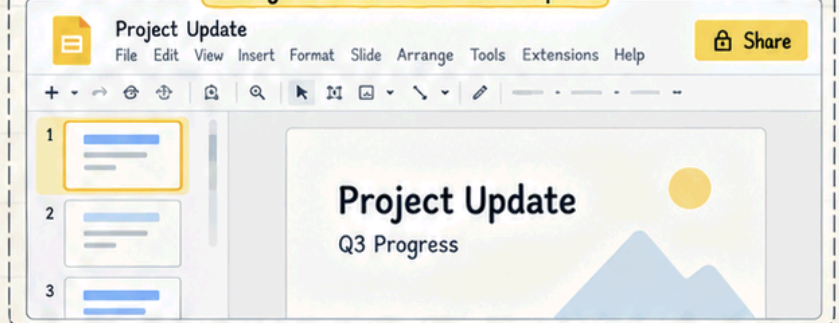

Google Sheets collaboration features make it easy to work together, give feedback, keep data safe and track changes efficiently. ✓

Google Slides – Presentation Basics

1 What is Google Slides?

- Google Slides is a **cloud-based** presentation tool from Google.
- Helps you create, edit and share presentations online.
- Useful for meetings, reports, training and project updates.

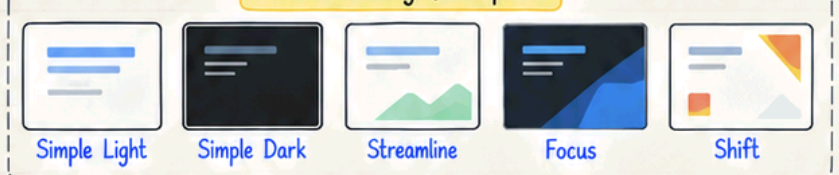

Google Slides Interface (Example)

2 Themes

- Themes provide a **consistent look and feel** to your presentation.
- You can choose from built-in themes or create your own.
- A theme controls colors, fonts and background styles.

Theme Gallery (Example)

3 Layouts

- Layouts help you **organize content** on a slide.
- You can choose different layouts like Title, Title and Content, Two Columns, Image with Text, etc.
- Using layouts keeps your presentation clean and consistent.

Common Slide Layouts (Example)

4 Animations vs Transitions

- Animations** add movement to objects (text, images, shapes) on a slide.
- Transitions** are effects that play when moving from one slide to another.
- Use simple and subtle effects to keep your presentation professional.

Animation Examples

- ★ ★ ★ Appear
- ★ ★ ★ Fade in
- ★ ★ ★ Fly in
- ★ ★ ★ Zoom in
- ★ ★ ★ Spin

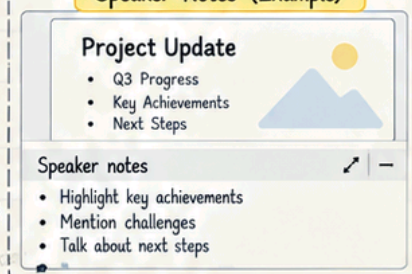

Transition Examples

- None
- Fade
- Slide
- Wipe
- Split
- Dissolve

5 Speaker Notes

- Speaker notes help you add **private notes** for yourself.
- Notes are visible only to you during the presentation.
- Useful for key points, reminders and talking points.

Speaker Notes (Example)

Tips & Best Practices

- ✓ Use a clean and consistent theme
- ✓ Choose the right layout for content
- ✓ Use subtle animations and transitions
- ✓ Add speaker notes for better delivery
- ✓ Keep text short and use visuals
- ✓ Maintain consistent fonts and colors

Key Takeaway

- 💡 Google Slides makes it easy to create professional and engaging presentations with themes, layouts, animations, transitions and speaker notes.

Gmail – Complete Notes

1 Compose an Email

- Click on **Compose** to write a new email.
- Add recipients (To, Cc, Bcc), subject and message.
- Use formatting options, emojis and links.
- You can also **schedule send**, set confidential mode and enable read receipts (via extensions).

Compose Window (Example)

2 Labels

- Labels help you **organize** and **categorize** your emails.
- You can **create custom** labels and color code them.
- One email can have multiple labels (unlike folders).
- Useful for keeping your inbox clean and easy to manage.

Labels Example

3 Filters

- Filters** automatically organize your incoming emails.
- You can set **conditions** and choose an action (like apply label, archive, delete, etc.).
- Useful to keep your inbox clutter-free.

Create a Filter (Example)

4 Search Operators

- Use **search operators** to quickly find specific emails.
- You can search by sender, subject, keywords, date, labels, attachments and more.
- Helps save time and find important information fast.

Common Search Operators (Examples)

Operator	Example	What it finds
from:	from:rahul@company.com	Emails from a specific sender
to:	to:me	Emails sent to you
subject:	subject:project update	Emails with specific subject
has:	has:attachment	Emails with attachments
label:	label:projects	Emails with a specific label
after:	after:2026/09/01	Emails after a specific date
before:	before:2026/09/30	Emails before a specific date
is:	is:unread	Unread emails

5 Attachments

- Use the **attachment (paperclip)** icon to attach files.
- You can attach files from your device, Google Drive or insert links.
- Gmail supports large files using **Google Drive** (up to 25 MB directly, larger files via Drive link).

Attach Files (Example)

Tips & Best Practices

- Use clear and meaningful subject lines.
- Organize emails using labels and filters.
- Use search operators to find emails fast.
- Keep important emails starred.
- Use Drive links for large attachments.
- Regularly clean your inbox.

Key Takeaway

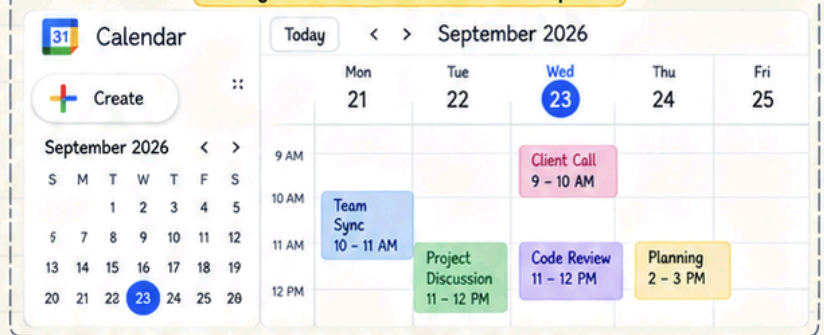

Gmail helps you communicate and manage emails efficiently with compose, labels, filters, search operators and attachment options.

Google Calendar – Complete Notes

1 What is Google Calendar?

- Google Calendar is a **cloud-based time management** tool from Google.
- Helps you **schedule** events, meetings, and reminders.
- You can access it from web, mobile app and integrate with other Google apps.
- Useful for **personal** and professional time management.

Google Calendar Interface (Example)

2 Creating Events

- Click on **Create** and choose **Event**.
- Add title, **date**, time, location and description.
- You can also add **guests**, attach files and set notifications.
- Click **Save** to create the event.

Create Event (Example)

Project Meeting

Event Out of office Task Appointment slots

Wed, Sep 23, 2026 10:00 AM – 11:00 AM

☐ All day ☐ Does not repeat

Meeting Room / Google Meet

Add guests

Discuss project progress and next steps.

More options Save

Event Options

- Title** Give a clear event name
- Date & Time** Set start and end time
- Location** Add physical location or Google Meet link
- Guests** Add people to invite
- Description** Add agenda or details
- Attachment** Attach files (Docs, Sheets, etc.)
- Notifications** Set email or pop-up reminders

3 Recurring Meetings

- Use **Does not repeat** to set recurring events.
- Choose **Daily**, **Weekly**, **Monthly** or **Custom**.
- Useful for regular team meetings, status calls or reminders.

Recurring Event (Example)

Repeat

Daily
Weekly
Monthly
Yearly
Custom...

Common Use Cases

- ✓ Daily standup meeting
- ✓ Weekly team sync
- ✓ Monthly project review
- ✓ Yearly performance discussion
- ✓ Custom recurrence (e.g., every 2 weeks)

4 Reminders

- Set **notifications** to remind you before an event starts.
- Choose **email** or **pop-up** reminder.
- You can set multiple reminders.
- Helps you never miss an important meeting or task.

Reminder Settings (Example)

Add notification

Notification minutes

Email day

+ Add notification

Reminder Types

- Pop-up notification**
Shows a reminder on your device
- Email notification**
Sends an email to your inbox
- Multiple reminders**
Set more than one reminder (e.g., 10 minutes before and 1 day before)

5 Invites & Shared Calendars

- Add **guests** to invite people to events.
- Guests will receive an email invitation.
- You can also **share** your calendar with others.
- Useful for team collaboration and managing schedules.

Invite Guests (Example)

Add guests

rahul@company.com

priya@company.com

amit@company.com

Share Calendar (Example)

Share with specific people

Enter names or email addresses

☐ Notify people

5 Tips & Best Practices

- ✓ Use clear and meaningful event titles.
- ✓ Set reminders to avoid missing meetings.
- ✓ Use recurring events for regular meetings.
- ✓ Share calendars with the right people.
- ✓ Keep your calendar organized with colors and labels.

Key Takeaway

Google Calendar helps you plan, manage and collaborate on your time easily with events, recurring meetings, reminders, invites and shared calendars.

Google Meet & Chat – Complete Notes

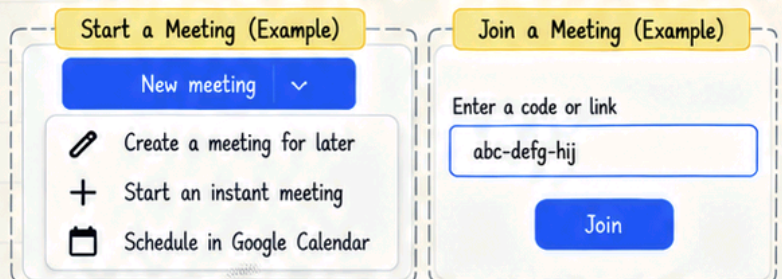

1 What is Google Meet?

- Google Meet is a **video conferencing** tool from Google.
- Helps you conduct online meetings, classes, interviews and team discussions.
- Accessible from web, mobile app and integrated with Google Calendar.
- Useful for both personal and professional communication.

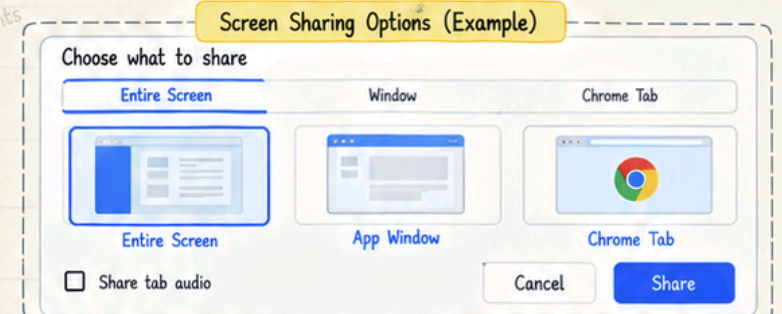

2 Joining & Creating Meetings

- Click on **New Meeting** to start an instant meeting.
- You can also **join** using a meeting **link or code**.
- Schedule meetings directly from Google Calendar.
- Useful options: Add guests, set join permissions, enable waiting room.

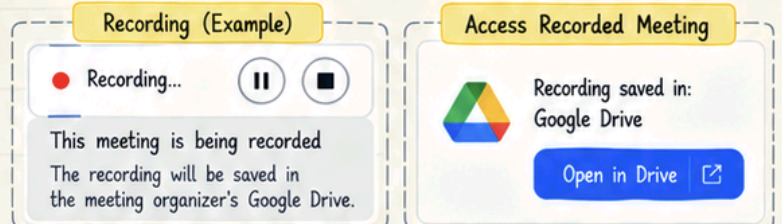

3 Screen Sharing

- You can **share** your entire screen, a specific window or a browser tab.
- Useful for presentations, demos, document reviews and troubleshooting.
- You can also share audio along with your screen.

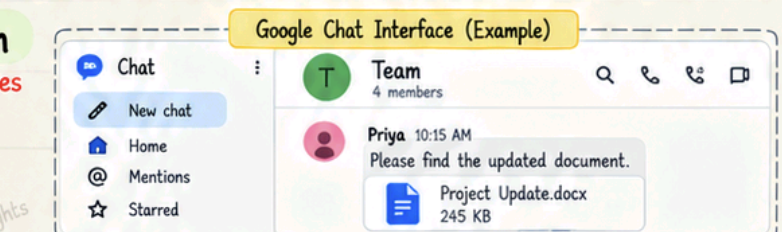

4 Recording Meetings

- Click on **Record** to save the meeting (the option is available based on organization settings).
- Recordings are saved in Google Drive and can be shared with team members.
- Useful for team reviews, training sessions and record keeping.

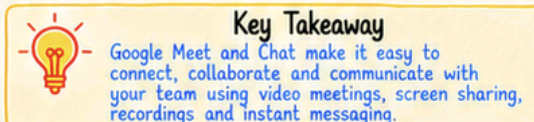

5 Google Chat – Team Communication

- Google Chat helps you send **direct messages** and have **group conversations**.
- You can share files, links and emojis.
- Useful for quick questions, updates and team collaboration.

6 Tips & Best Practices

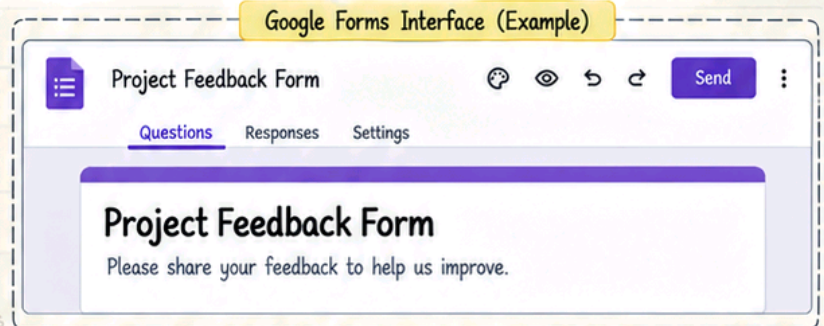

- Use Google Calendar to schedule and manage meetings.
- Share only necessary screens or tabs.
- Use recordings for important discussions.
- Keep chat organized using spaces and threads.
- Follow meeting etiquette (mute when not speaking, use chat wisely).

Google Forms – Complete Notes

1 What is Google Forms?

- Google Forms is a **free online tool** from Google to create surveys, quizzes and feedback forms.
- Helps you **collect information** easily and view responses in **real-time**.
- Useful for feedback, registrations, event sign-ups, quizzes and more.

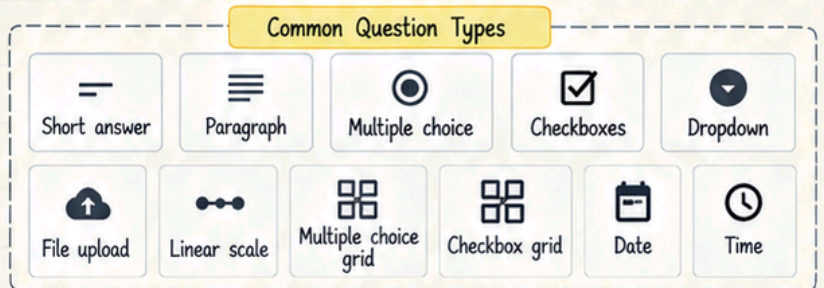

2 Creating Forms

- Click on **Blank form** or choose a template.
- Add a title, description and questions.
- Customize the **theme** (color, image, font) to make it look professional.
- Click **Send** to share the form via link, email or embed.

3 Question Types

- Google Forms provides **different** question types to collect data.
- Choose the right type based on your requirement.
- Use **options** like required questions, multiple choice, dropdown, etc.

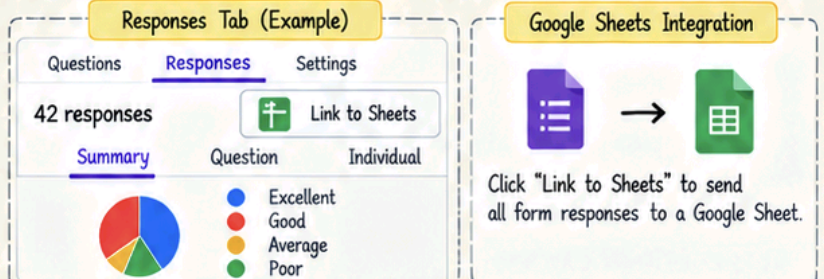

4 Validation & Settings

- Use **validation rules** to control the type of data users can enter.
- Examples: Number, Email, URL, Text length, Custom text.
- You can also mark questions as **Required** to avoid empty responses.

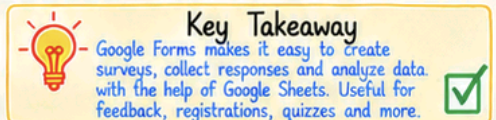

5 Responses & Sheets Integration

- Responses are collected **automatically** and can be viewed inside Google Forms.
- You can see summary charts and individual responses.
- Click on **"Link to Sheets"** to export responses to Google Sheets for analysis.

6 Tips & Best Practices

- Use clear and simple questions.
- Choose the right question type.
- Use validation to get correct data.
- Keep the form short and easy to fill.
- Enable required questions where needed.
- Use Google Sheets for better analysis.
- Customize the theme for a professional look.

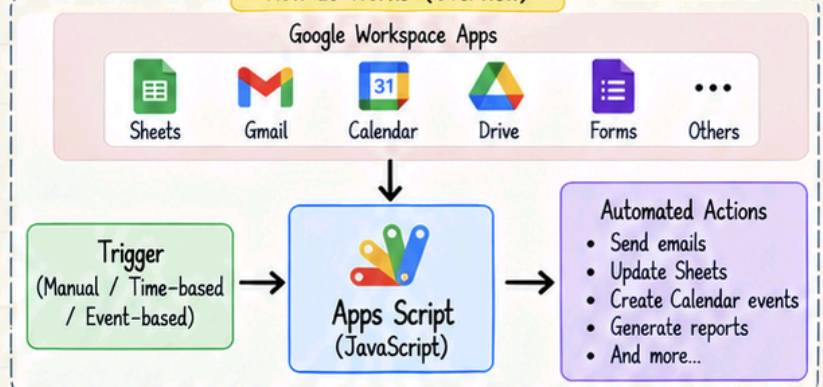

Google Workspace Automation – Apps Script Basics

1 What is Google Apps Script?

- Google Apps Script is a **cloud-based JavaScript** platform from Google.
- Helps you **automate tasks** in Google Workspace apps like Sheets, Gmail, Calendar, Drive, Forms and more.
- You can write simple scripts to save time and reduce manual work.
- Useful for automating reports, emails, data processing and integration between apps.

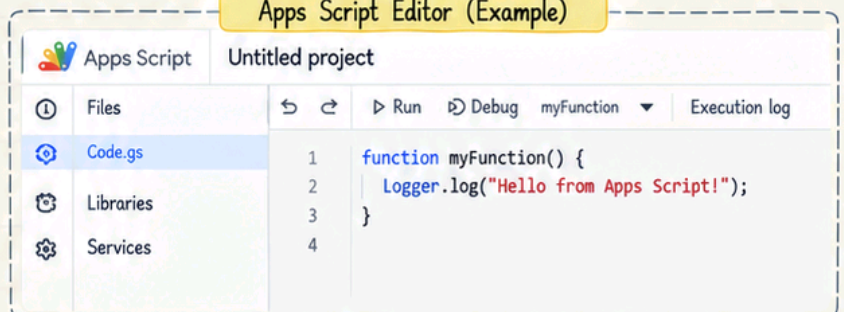

How It Works (Overview)

2 Apps Script Editor Basics

- Open **Apps Script** from any Google app (e.g., Extensions → Apps Script in Google Sheets).
- Write your code using **JavaScript**.
- Click **Run** to execute the script.
- Authorize the script to access your Google account.
- View **logs** to debug and check output.

Apps Script Editor (Example)

3 Triggers

- Triggers** run your script automatically.
- Types of triggers:
 - Time-driven** – Run at a specific time (e.g., daily, weekly).
 - Event-driven** – Run when an event happens (e.g., form submitted, Sheet updated).
 - Manual** – Run the script manually from the editor.

Types of Triggers (Example)

Add Trigger
 Choose which function to run: sendDailyReport
 Choose which deployment should run: Head
 Select event source: Time-driven
 Select type of time based trigger: Day timer
 Select time of day: 9am to 10am
 Cancel Save

Common Trigger Use Cases

- Send daily email reports
- Update a Sheet automatically
- Process form responses
- Create calendar events
- Move or backup files
- Send reminder emails

4 Automated Emails

- Use **GmailApp** service to send emails.
- You can send emails with subject, body, attachments and use dynamic data from Sheets.

Send Email using Apps Script (Example)

```

function sendEmail() {
  var email = "team@company.com";
  var subject = "Daily Report";
  var body = "Please find the attached report.";
  GmailApp.sendEmail(email, subject, body);
}
  
```

5 Google Sheets Automation

- You can read, **write** and update data in Google Sheets using scripts.
- Useful for generating reports, formatting data, sending alerts based on sheet values, etc.

Update Google Sheets (Example)

```

function updateSheet() {
  var sheet = SpreadsheetApp.getActiveSheet();
  sheet.getRange("A2").setValue("Updated");
  sheet.getRange("B2").setValue(new Date());
}
  
```

Common Automation Examples

- ✓ Send daily/weekly reports via email
- ✓ Auto-update status in a sheet
- ✓ Process form responses automatically
- ✓ Create calendar events from sheet data
- ✓ Backup files to Drive
- ✓ Send approval/reminder emails
- ✓ Generate and share reports

6 Tips & Best Practices

- ✓ Start with simple scripts and test them.
- ✓ Use triggers for repetitive tasks.
- ✓ Handle errors using try...catch.

- ✓ Keep your code modular and organized.
- ✓ Use logs for debugging (Logger.log()).
- ✓ Follow Google's security and authorization guidelines.

Key Takeaway

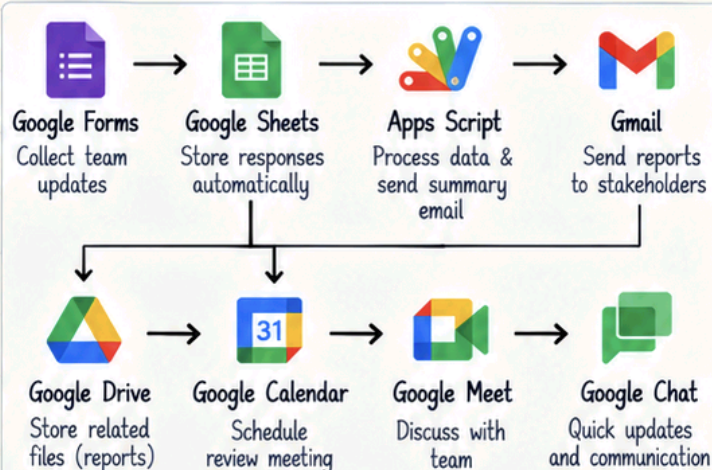

Google Apps Script helps you automate tasks across Google Workspace apps, making your work faster, easier and more efficient with triggers, automated emails and Sheets automation.

Google Workspace – Real-World Workflow + Interview Q&A

1 End-to-End Workflow (Example)

- Let's take an example: Team project status reporting using Google Workspace.
- Collect responses using **Google Forms** (from team members).
- Responses are stored in **Google Sheets** automatically.
- Use **Apps Script** to process data and send summary email.
- Visualize progress using **Google Sheets** charts and share with team.
- Schedule a review meeting using **Google Calendar** and discuss via **Google Meet** + **Google Chat**.
- Store related files in **Google Drive** and share with the team.

Workflow Diagram

2 Useful Keyboard Shortcuts

Action	Shortcut (Windows / Mac)
Open Google Drive	drive.google.com (or g then d)
Open Gmail	g then m
Open Google Calendar	g then c
Open Google Sheets	g then s
Open Google Docs	g then d then o
Open Google Meet	g then m then v
Search in Gmail	/
Create new email	c
Reply to email	r
Forward email	f
Archive email	e
Toggle side panel	Ctrl + . / Cmd + .
Open keyboard shortcuts	Ctrl + / (or Cmd + /)

4 Additional Real-World Use Cases

- Employee feedback survey (Forms → Sheets → Email report)
- Project tracking dashboard (Sheets + Charts + Drive sharing)
- Automated task reminders (Apps Script + Gmail)
- Event registration and calendar invites (Forms + Calendar)
- Team document collaboration (Docs/Sheets + Comments)
- Regular status meetings (Calendar + Meet)
- Internal team communication (Chat)
- Centralized document storage (Drive with proper permissions)

5 Tips & Best Practices

- ✓ Use the right tool for the right purpose.
- ✓ Automate repetitive tasks using Apps Script.
- ✓ Keep files organized with clear folder structure.
- ✓ Use sharing permissions and protected ranges.
- ✓ Follow security and data privacy guidelines.
- ✓ Use keyboard shortcuts to save time.

3 Common Interview Questions & Answers

Question	Sample Answer (Short)
What is Google Workspace ?	It is a cloud-based productivity suite by Google with tools like Gmail, Drive, Docs, Sheets, Calendar, Meet, Forms etc.
How is Google Workspace different from Microsoft 365 ?	Both are productivity suites. Google Workspace is cloud-first with real-time collaboration, while Microsoft 365 is more integrated with Office desktop apps.
Which tool would you use to collect survey responses?	Google Forms . It is easy to create, share and automatically stores responses in Google Sheets .
How can you automate a daily report in Google Workspace?	Use Google Apps Script with a time-driven trigger to read data from Sheets and send a summary email via Gmail.
How do you share files securely with a team?	Use Google Drive's sharing options with specific permissions (Viewer, Commenter, Editor) and restrict access to only required people.
Can you track changes in Google Docs/Sheets?	Yes, using Version history . You can also see who made the changes and restore previous versions.
How would you schedule a recurring team meeting ?	Use Google Calendar and set the event to Repeat (Daily, Weekly, Monthly, etc.).
How can you integrate Google Forms responses with Sheets?	Forms responses are saved automatically in a linked Google Sheet. You can then use formulas, charts or Apps Script to process the data.

Key Takeaway

Google Workspace tools work seamlessly together to help you collect data, collaborate, communicate, automate tasks and stay organized. Understanding real-world workflows and common interview questions can help you use these tools effectively in your job and in interviews.
