

SQL Practical Question Paper

Sample Table: `Student`

StudentID Name Marks

101	Rahul	75
102	Priya	82
103	Amit	68

Section A — CREATE

1. Write a SQL command to create the `Student` table with the following columns:
 - o `StudentID` – INT
 - o `Name` – VARCHAR(50)
 - o `Marks` – INT
2. Create another table named `Course` with:
 - o `CourseID` – INT
 - o `CourseName` – VARCHAR(50)
 - o `Fees` – DECIMAL(10,2)

Section B — ALTER

3. Add a new column `Age` to the `Student` table.
4. Change the size of the `Name` column to `VARCHAR(100)`.
5. Rename the column `Marks` to `TotalMarks`.
6. Remove the `Age` column from the `Student` table.

Section C — UPDATE

7. Update Rahul's marks to 85.
8. Increase Priya's marks by 5.
9. Update Amit's name to `Amit Kumar`.
10. Update the marks of all students to 70.

Section D — DELETE

11. Delete the student whose `StudentID` is 103.
12. Delete all students whose marks are below 75.
13. Delete all records from the `Student` table without deleting the table itself.

☆ Exam Challenge

14. Create a table `Employee` with 3 columns, insert 3 records, then:
 - Add a `Salary` column.
 - Update the salary of one employee.
 - Delete one employee.
 - Rename the `Salary` column to `MonthlySalary`.
